

## Checklist: Getting Started with DCM

DCM is built to integrate seamlessly with your CCTV network (or cameras providing an IP protocol feed) through an encrypted connection with our AWS cloud infrastructure. Deploying DCM is easy, with support provided through each step of the process by our customer support team;

### Deployment Checklist

- Review Technical Requirements**  
Understand DCM technical requirements to ensure successful deployment and accurate readings. Documentation: [Fact Sheet: Technical Requirements Checklist](#)
- Sign Up for an Account**  
Speak to our sales team and sign-up for a DCM account. You'll then receive a link to activate your account.
- Activate Account**  
Enter some basic registration details to activate your DCM account. You'll then be stepped through how to [Setup Users](#), [Setup Network](#) and [Calibrate Cameras](#).
- Setup Users**  
Step through the online process of user setup to create your team and share your dashboard.
- Setup Network**  
Step through the online process of installing the VPN profile and whitelisting IP's to connect to the DCM cloud infrastructure.
- Calibrate Cameras**  
Step through the online process of adding cameras and calibrating settings to ensure optimal insights in the DCM dashboard.
